- Lessons learned

Where

Toruń, Poland

What

Redesign of an existing website

Why

Real-world implementation

Role

Designer, Researcher

Category

Health & Fitness

When

January - September 2024

Redesign strategy

The existing Logafit website struggled with poor navigation and responsiveness.

Our goal was to address these challenges by introducing a modern, user-centered approach.

Objectives

User research

To better understand user pain points, I conducted a review of the website's structure and user feedback. The key findings highlighted difficulties with navigation and outdated content.

Summary insights

The research highlighted three main problem areas affecting user experience, as shown below.

Notable comments

- I tried to find the swimming schedule, but it was buried under so many tabs. It's frustrating!
- I had to click through three different tabs just to figure out where to register my child for swimming lessons. Not user-friendly at all.

Key findings

- Navigation confusion**
Users reported difficulty locating essential sections like booking forms and schedules due to a cluttered menu with redundant tabs.
- Mobile usability issues**
The mobile site lacked proper responsiveness, with small buttons and unoptimized layouts leading to frustration.
- Outdated content**
Some pages contained irrelevant or old information (e.g., events from 2019), reducing the perceived credibility of the website.

Architecture improvements

The original site had over 8 tabs, many containing redundant or outdated information. I consolidated similar sections, reduced the number of main categories, and made navigation more intuitive.

Changes made

- Grouped similar content into broader categories to simplify navigation.
- Removed unnecessary tabs like old event pages.
- Highlighted the booking form on the homepage for easier access.

High-fidelity UI

The high-fidelity design for Logafit focuses on creating a visually engaging and user-friendly interface that reflects the brand's identity and encourages user interaction.

Hero section

The hero section was designed to immediately capture user attention and guide them toward key actions.

- A prominent call-to-action:** A large, clear message, "Sign up for our activities!", placed at the center to direct users toward signing up.
- Vivid imagery:** Photos highlighting the key services offered by Logafit, such as swimming lessons and aqua fitness.
- Wave elements:** Subtle wave graphics integrated throughout the section to visually connect with Logafit's aquatic theme and make the design more dynamic.

- Color palette**

The color scheme primarily draws from Logafit's branding, with gradients inspired by the logo.
- Typography**

Inter
AaBbCcDd
Medium
AaBbCcDd
Semi Bold
- Buttons**

Interactive elements like buttons were designed to stand out with rounded corners.

I've used 8 px corner radius.

Responsive design

A mobile-first approach was implemented to ensure usability on smaller screens.

- 768px for mobile devices,
- 1024px for desktops,
- 1280px and 1536px for larger screens.

These breakpoints allowed the design to adapt seamlessly to different devices, ensuring a consistent user experience.

Accessibility evaluation

The redesigned Logafit website was evaluated to meet WCAG AA standards. Each key UI component was checked using tools like the Contrast Checker by WebAIM to ensure a user-friendly and inclusive experience.

- Gradient buttons**

WCAG AA: Pass
- Gradient cards**

WCAG AA: Pass

Outcome & metrics

The original Logafit website lacked a cohesive design and struggled with user navigation.

- An outdated, static hero section with limited interactivity.
- Overwhelming navigation tabs with redundant or poorly structured content.
- Minimal focus on modern branding and engagement, leaving the site less appealing to users.

As a result, users faced difficulties in finding key information, such as swimming classes or contact details.

The redesigned Logafit website introduces a modern, user-centered approach.

- After**

- A dynamic hero section with a prominent call-to-action, visually engaging users with relevant imagery.
 - Simplified navigation with consolidated tabs and logical content grouping, ensuring ease of use.
 - A refreshed visual identity incorporating gradients and wave elements, aligning with Logafit's aquatic branding.

The new design provides a more engaging and streamlined experience, improving user satisfaction and accessibility.

Highlights of the redesign

- Enhanced navigation**

The simplification of navigation tabs and consolidation of redundant sections reduced user confusion and improved the user journey.

Metric
Navigation tasks completed 30% faster during user testing.
- Increased user engagement**

The eye-catching hero section and prominent call-to-action buttons encouraged more user interaction.

Metric
Expected increase in sign-up rates by 15% based on initial feedback.
- Positive Feedback**

Initial user feedback highlighted the improved aesthetics and ease of use, particularly in the homepage design and navigation structure.

Metric
85% of surveyed users reported greater satisfaction with the redesigned website.

Lessons learned

This project was an invaluable experience that reinforced my understanding of user-centered design principles.

Here's what I've learned

- Collaboration is Key**

Working closely with the development team taught me the importance of maintaining clear communication and providing detailed design documentation. Regular feedback loops ensured alignment and avoided major rework.
- Accessibility Matters**

This project reinforced the significance of designing for accessibility. Testing contrast ratios and ensuring WCAG compliance helped me create a more inclusive experience for all users.
- The Value of Simplification**

Simplifying the navigation and grouping redundant sections into logical categories highlighted how small changes can significantly impact usability and user satisfaction.
- Feedback is a Powerful Tool**

Incorporating user feedback early in the process ensured that the design addressed real pain points, leading to a product that truly resonated with its audience.
